Cultural Behavioural Change for Sustainability and Global Citizenship

Cultural behaviour change is fundamental to a shift in social mindsets and the subsequent implementation of sustainability and global citizenship. This course is suitable for anyone working with community, volunteer and adult and continuing education learning groups. We will examine how cultures and societies change for the benefit of local communities and wider society and for the increased protection of the natural environment.

Why is cultural behaviour change so important in our modern lives?

How can we assist our local communities through cultural change?

Why can't we just keep doing what we've always done?

How do we ensure that behaviour change is not detriment of local people and cultures?

How much do we really need to change to implement the sustainability and global citizenship agenda?

Explore these issues and more. People attending the course will leave with practical activities and information to help them understand and support behaviour change for sustainability and global citizenship that is beneficial to their local communities and wider society.

Lunch, refreshments and course notes provided

****** Why not get a work, social or volunteer group together and take advantage of our group rates. ******
