- **This is a PBL activity, please work in your groups to investigate the problem**

*Giganticus* is a film about a space ship and its crew that are accidentally miniaturised and end up travelling through a human body. In order to gain finance for the making of the film it has been agreed that the DVD extras will contain scientific information that will enable extracts from the film to be used in the classroom for AS-level Chemistry students. The animations are therefore required to be scientifically as realistic as possible and a team of scientists has been hired to advise the production company.

*Let's look at the feedback after the module has finished .....*
